BigData

# PROJECT MANAGEMENT SYSTEM

Corporate project management system provides micro level monitoring of the process for each project in accordance with the resources and finances to build schedules and Gantt charts and keep records of work-time. Built-in Financial Review displays consolidated financial information on the planned and actual income of the company. The system introduces a CRM module that allows storage of all contacts and tracks the history of interaction with each client.

## Sphere:

Workflow management system

## Technologies:

J2EE, Tapestry, Rhino, Lucene, Jasper Report, Axis, NetCharts, PingFederate, JavaScript, Ajax, Dojo, Linux(Ubuntu), MS SQL 2003

# INFORMATION AGGREGATOR FOR DMC

The system accumulates information (data on offered and recommended products and services) collected from public sources on the Web. The information is transferred to the database for further creation of common access point for all the suppliers and analysis of the audience.

## Sphere:

Business services

## Technologies:

Scala, Java, Python, Scrapy

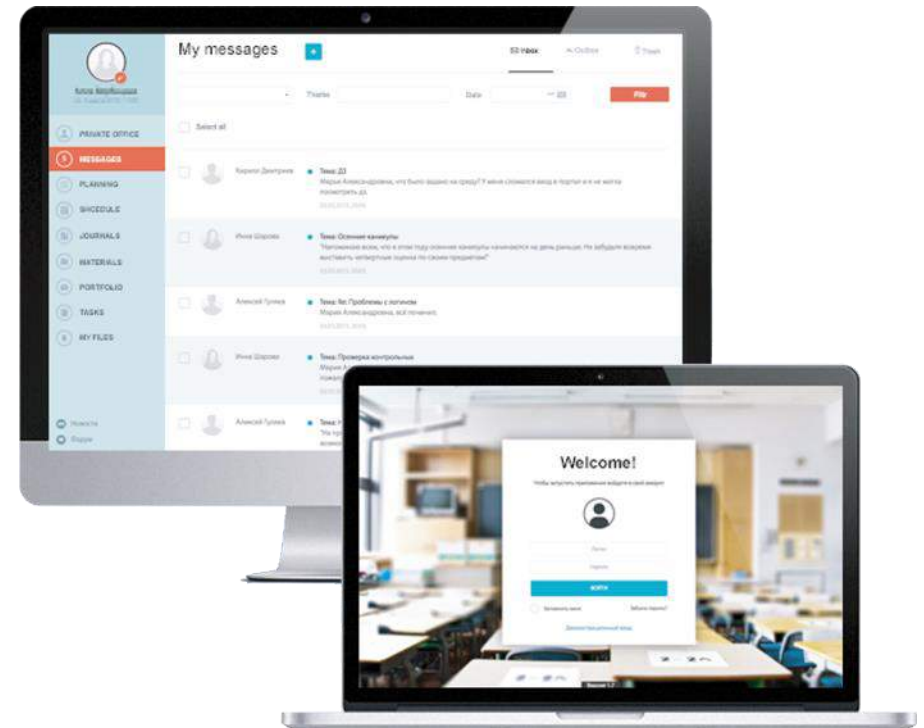

# EDUCATIONAL PLATFORM

The educational platform is a solution for the efficient organization of modern educational processes. Students receive interactive tutorials and high-quality, time-saving services that allow them to focus on achieving results.

**Sphere:**  
Education

**Tecnologies:**  
JavaScript, AngularJS, GulpJS, Redis, Rails,  
Ruby, Sidekiq

# PORTAL FOR REGISTERING CLIENTS

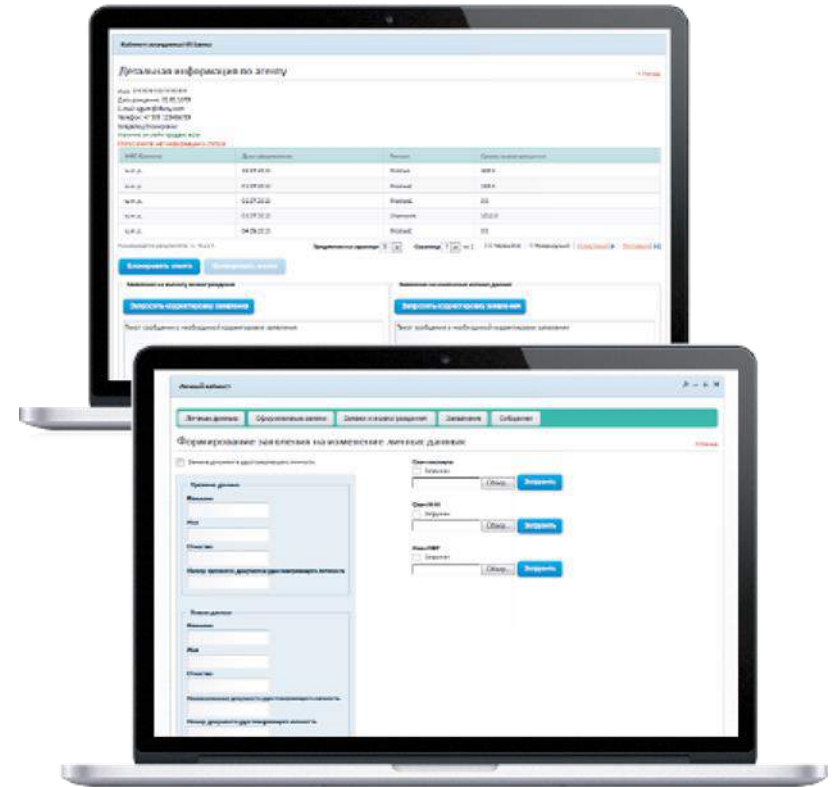

The portal allows registering personal and corporate clients of the bank, keeping their accounts and entering details about them. A personal user account dashboard has been implemented which allows for loan application and tracking as well as editing personal information and managing contracts with agents.

## Sphere:

Bank workflow management

## Technologies:

Liferay framework, MySQL, Tomcat, Jasper Reports, LDAP, JavaScript, CSS

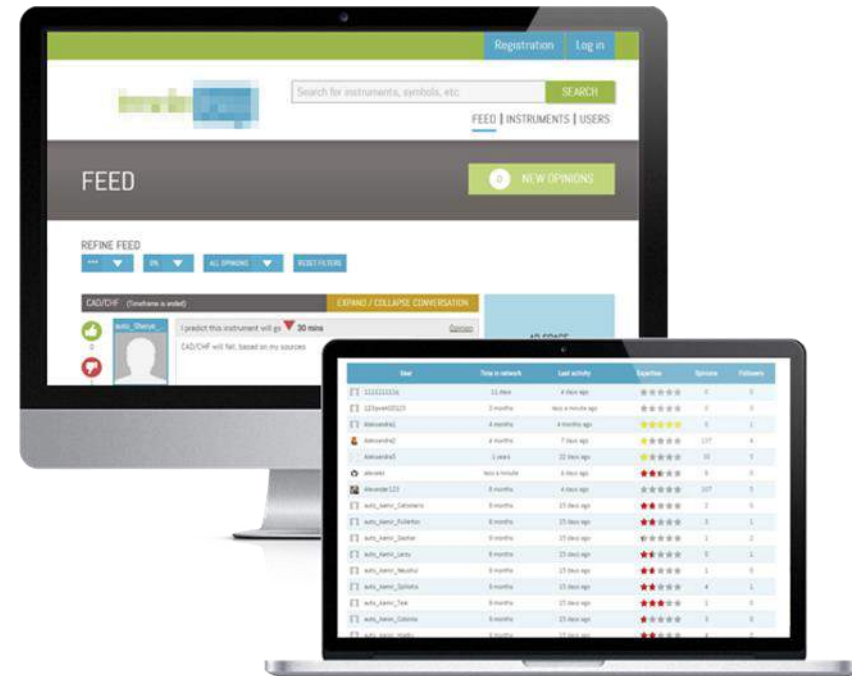

# STOCKMARKET SOCIAL NETWORK

Social network for market players and experts providing the opportunity to earn money and optimize trading strategies. The registered user can place their forecasts about rise/decline of certain stock tools. After the expiration of a certain period the system figures out the accuracy of the forecast, calculates the expert rating of the user, the popularity of the tools, etc. The users can arrange their deals according to the evaluation of the most knowledgeable experts. The system is capable of working with 1.000.000 users.

**Sphere:**  
Social Networking

**Technologies:**  
Java, Spring, AngularJS

# LIFE BUTTON

Mobile application intended for people suffering diabetes and allergy. With a press of a single button, the following application sends urgent information on a person to 911, individual physician or relatives of the person. Geo-locating function, speech-to-text function, and the screen lock emergency button function were implemented to allow the application collecting all the necessary information, and which can be easily accessed in case of anaphylactic shock. A user adjusts his personal application and text messaging settings just once and as soon as the adjustment is done, he is able to call 911 and send a text message using just one button.

## **Sphere:**

Health

## **Technologies:**

Java, Android, dagger, guava, slf4j, ACRA, volley

# APPLICATION FOR MONITORING EVENTS' DISCOUNT TICKETS

The application informs users about the upcoming events: concerts, parties that the user can be potentially interested in. The application also gives information on the best ticket prices and helps save both time and money.

**Sphere:**  
Entertainment

**Key technologies:**  
Xamarin.iOS, Parse, Stripe, Facebook iOS SDK

# DOM.RU

The application is designed for smartphone and tablet

users. It allows users to:

- watch TV-shows that a company provides;
- use favorable tv-guide;
- watch TV-shows in real time;
- record shows to watch later.

**Sphere:**

Telecommunication

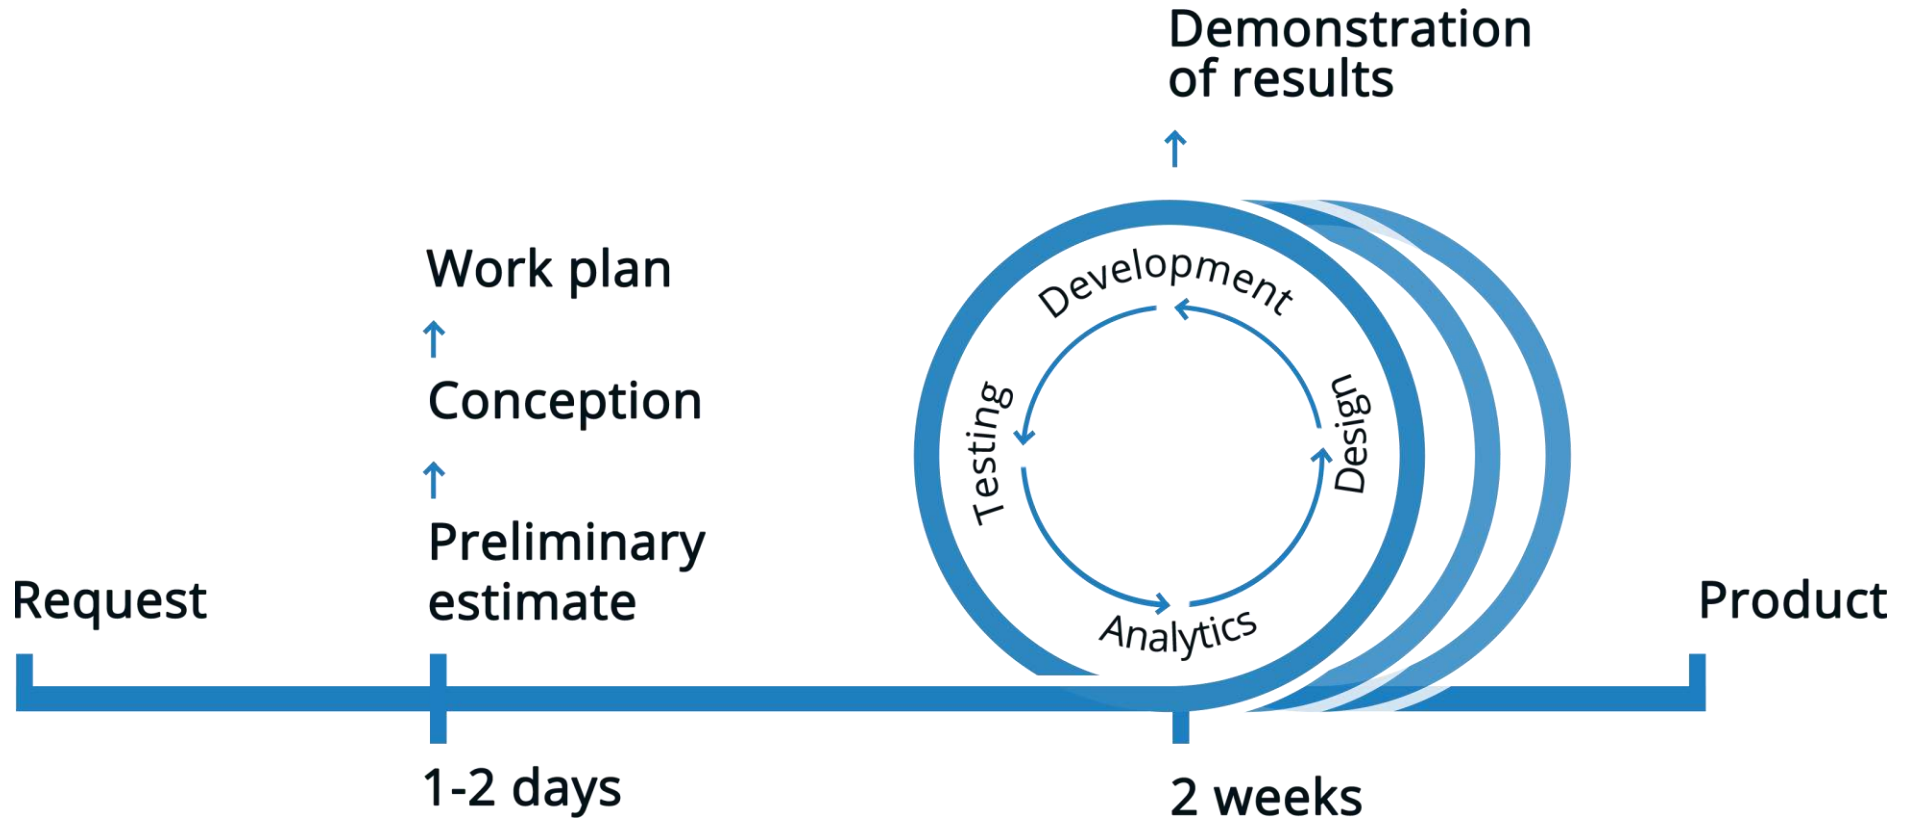

**Technologies:**

iOS, Android
